

NEW CHARTER SCHOOL COMPLETE IN MONTHS

Mobile Modular delivers the first "museum model" classroom space for a popular new Georgia charter school.

THE CHALLENGE

A new Georgia charter school faced the challenge of finding adequate facilities for the upcoming school year. They required temporary modular housing with amenities and construction quality that a permanent building would offer. The modular construction solution would serve as the initial stage of a three-year facility plan. The charter school administrators outlined an ambitious set of requirements for a successful modular school building. It would require a flexible floorplan system, natural light, energy efficiency, and the appearance of permanent construction. The school buildings needed to be ready for occupancy by June 1st.

THE SOLUTION

Mobile Modular recommended the CampusMaker ModPod® to meet the charter school's requirements. The flexible prefabricated building includes eight classrooms, a media center, restrooms, and multiple ancillary rooms for faculty. The ModPod complex features extra-high efficiency T-5 lights, larger windows, high-efficiency HVACs, and Bard CS2000 climate control monitoring platforms. Mobile Modular also provided advisory support for land preparation. The school's ModPod complex has the appearance of a permanent structure and is expandable.

Size:	11,000 sq. ft.
Time:	10 Days
Building Use:	Classrooms, Administrative, Restrooms and Multi-Purpose
