

BERKLEY SENIOR SERVICES

Mobile Modular installed a modular building for Berkley Senior Services' staff that blended into the surrounding area and utilized existing features.

THE CHALLENGE

Berkley Senior Services in Martinsburg, WV, was using a 100-year-old home for staff space, but the home was in disrepair. They decided the home would need to be torn down and a new office could be built in its place

It was important that the building would blend into the traditional features found in the surrounding area and that it would be designed to fit in the space with the ability to use existing sidewalks and parking lots to save on costs.

Customer Name: Berkley Senior Services

Project Location: West Virginia

Building Type(s): Modular Healthcare

Job Type: Sale

Total Sq. Ft: 2,352 sq. ft.

THE SOLUTION

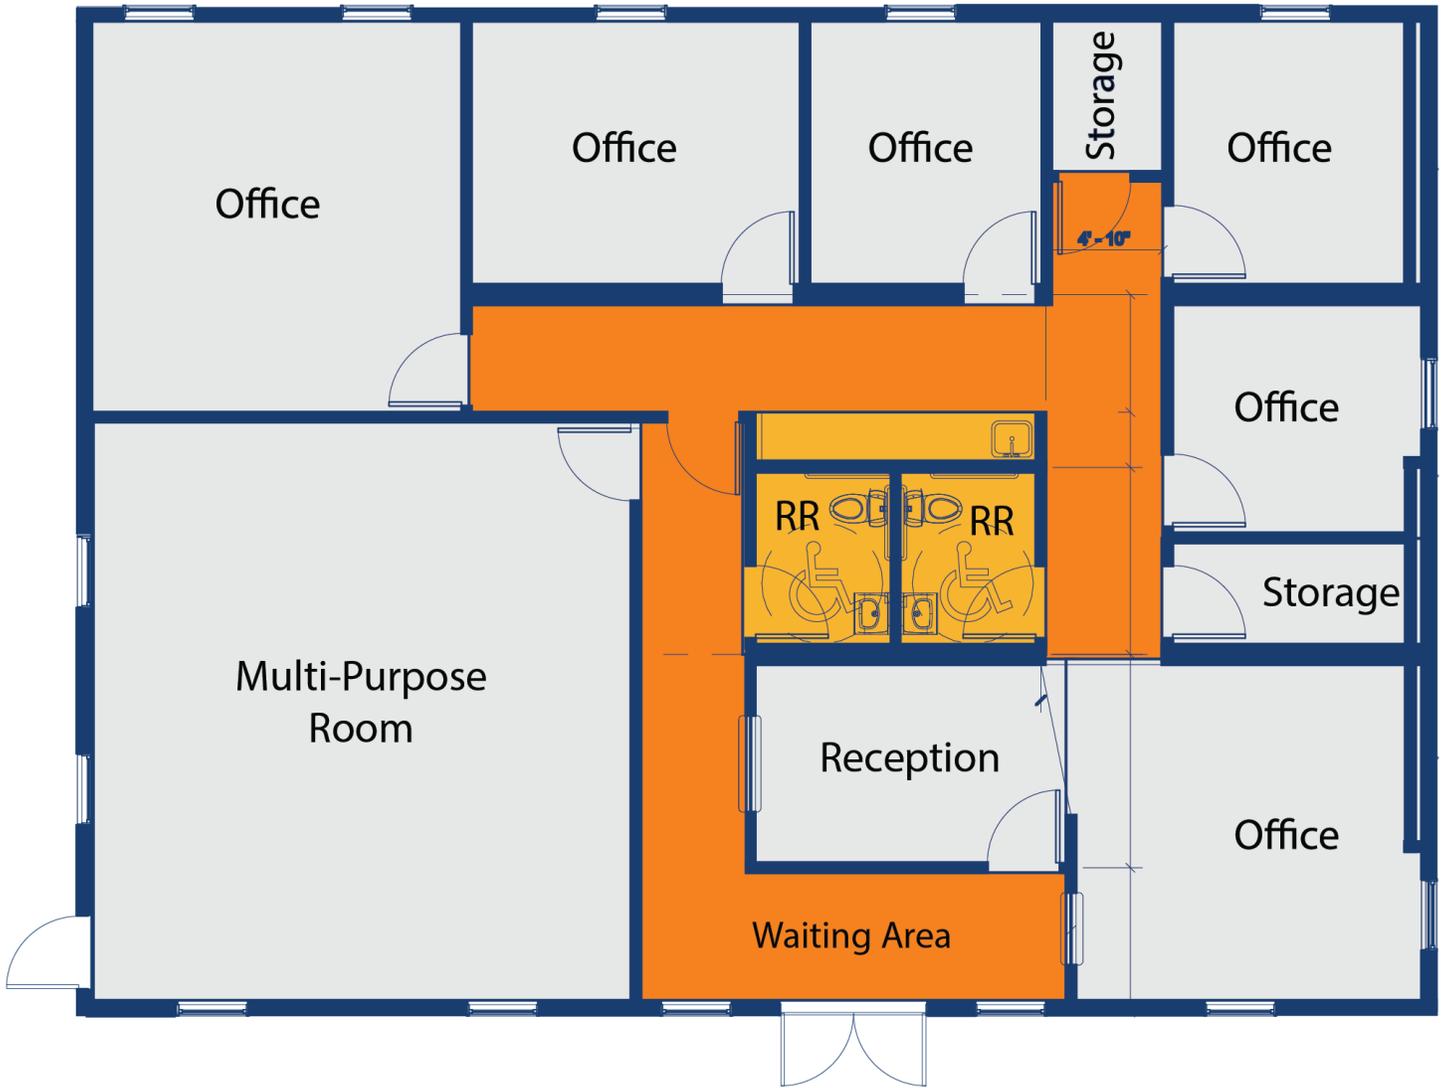

To utilize the existing property, the home was torn down and our team installed a 2,352 sq ft. modular building in its space with a custom interior design that was created to accommodate the staff's workflow. The entrance includes two separate reception windows for visitors to speak with the staff, and each of the areas provides access to specific staff based on needs. A multi-purpose room was also included in the design so the space could be utilized by the community with access to restrooms and the option for the area to be securely shut off from the staff portions of the building.
