

# DECATUR SD 61 MODULAR CLASSROOM PROJECT SUCCESS

Discover how Decatur SD 61's urgent need for classrooms was met with a modular lease solution, ensuring school opened on time.

## THE CHALLENGE

The challenge presented itself in June when Decatur SD 61 was notified that an existing school building could not be occupied. With the fall school session rapidly approaching, the district was in dire need of a solution to accommodate the entire school enrollment. The urgency of the situation required a swift and effective response to avoid delaying the start of the school year, putting pressure on the district to find an immediate solution.

## THE SOLUTION

In response to this critical situation, the district engaged in a project to provide a temporary educational space through the lease of modular classrooms. The project aimed to design and install 16 classrooms and associated restrooms across three different buildings on a compressed schedule. This effort was to ensure that the school could open in time for the fall session without any delays. Working closely with school staff, the project team managed to prepare the site, deliver the buildings, and install a custom step, deck, and ramp system to connect all the buildings seamlessly. Despite the tight timeline and the challenges faced, the project was completed successfully, allowing the school to open on time and accommodate the entire student body as planned.
