# MOBILE MODULAR BUILDS NEW MODULAR COMPLEX FOR U.S. BUREAU OF RECLAMATION 

## A unique project supporting a vital

## organization

## THE CHALLENGE

The Bureau of Reclamation, established in 1902 through the Reclamation Act, is crucial for managing water resources in arid U.S. states. This agency's efforts include constructing major structures like Hoover Dam and Shasta Dam, aiding the development of the West.

Covering two-thirds of California, the Klamath Basin, and most of Nevada, the California-Great Basin Region is one of five Reclamation regions. It oversees significant water projects such as the Central Valley Project, Oregon's Klamath Project, Nevada's Newlands, Humboldt, Washoe, and Truckee projects, and Central California's Cachuma, Orland, Santa Maria, Solano, and Ventura River projects.

## THE SOLUTION

The 15,080-square-foot building, comprising 56 offices, serves as the headquarters for a diverse team of professionals supporting the Klamath Project, crucial for providing irrigation to the Klamath Basin, including the Tule Lake and Lower Klamath National Wildlife Refuges. Enhanced with a steep roof for snow management, the building also features security measures like bullet-proof windows and doors at the entrance.

Customer Name: U.S. Bureau of Reclamation
Project Location: Klamath Falls, Oregon
Building Type(s): 56 Modular Offices
Job Type: Custom Modular Solution
Total Sq. Ft: $\quad 15,080 \mathrm{sq} . \mathrm{ft}$.

## BUILDING FEATURES
