

# JALEN ROSE LEADERSHIP ACADEMY

Mobile Modular built an addition for a growing school, including air-quality control, low-energy lighting, and green roof system option for the future.

## THE CHALLENGE

In 2011, JRLA held their first day of classes. After their first school year, they were ready to expand to meet the needs of their growing student population. In 2012, JRLA purchased an existing school building in Detroit. Their goal was to grow this school by six classrooms and provide the teachers with a break room. They first renovated the existing building to ensure it would blend with the new space to create a uniform and modern learning environment, and then were ready for the classroom additions.

## THE SOLUTION

The Mobile Modular team built a single story modular addition that consists of a brick exterior and steel siding along with oak trim detailing on the interior to allow the space to blend seamlessly. The building addition is separated by a firewall and consists of five standard classrooms, one teacher break room, and one plumbing module.

**Customer Name:** Jalen Rose Leadership Academy

**Project Location:** Detroit, MI

**Building Type(s):** Modular Classrooms

**Job Type:** Sale

**Total Sq. Ft:** 7,747 sq. ft.
