

SOPHISTICATED MODULAR VACCINE BUILDINGS IN 30 DAYS

Mobile Modular Custom Solutions Help
Meet Vaccination Needs

THE CHALLENGE

Florida-based DMG pharmaceutical company needed eight custom-built hard-wall buildings with HEPA air filtration systems that met the specific needs of the COVID-19 pandemic, including medical and clinical requirements. Buildings were installed at various locations across the US. Delivering all eight 1,000-square-foot units within 30 days and having them fully operational was a major challenge, but everyone collaborated and succeeded in meeting the deadline.

THE SOLUTION

Thanks to incredible teamwork, Mobile Modular Custom Solutions completed 8,000 square feet of highly complex, sophisticated medical buildings in less than the requested 30-day deadline.

Moreover, the team successfully took the project from schematics to construction to delivery like clockwork, helping to contribute to the national vaccination program.
